

# Dynamic Input Example

Data can be passed from Rust to Typst at runtime using `.with_inputs()`. The struct passed directly to `.with_inputs()` needs both `IntoValue` and `IntoDict` derives, while nested structs only need `IntoValue`. In the template, data is accessed via `sys.inputs`.

The invoice below is generated using inputs.

## INVOICE

**Bill To:**  
Acme Corporation

**Invoice #:** INV-2025-001  
**Date:** 2025-01-15

Description	Qty	Price	Amount
Web Development	40	\$75	\$3000
UI/UX Design	20	\$85	\$1700
Server Setup	8	\$100	\$800
<b>Total</b>			<b>\$5500</b>

Thank you for your business!
